

Instructions for 20' x 20' Do-It-Yourself Tent

Parts List

1 – 20' x 20' White Tent Top

12 – White Tent Stakes

1 – 2pc Center Pole

8 – Wooden Side Poles

1. Spread out the blue ground cover on the ground in the exact location that you plan to set up the tent.
2. Spread the tent top out on top of the ground cover with the “shiny” side up.
3. Stretch the ropes out at a 90 degree angle from the tent. Drive a stake into the ground 5' away from the tent along the line of each rope. Drive all but about 10" of the stake into the ground. This will include doing two at each corner, as there are two ropes at each corner.
4. Starting in one of the corners and using a half hitch knot, tie the rope to the top of the stake about 2' from the end of the rope. Repeat this step tying each rope to the corresponding stake.
5. Again, start in a corner and insert the wooden side poles into the grommet holes of the tent so that the bottom of the poles slant towards the center of the tent.
6. Assemble the center pole by snapping the two pieces together. Walk under the tent, push the center pole through the center grommet and then push the pole into a vertical position. Align the center pole with the middle stakes on each side.
7. Straighten all the side poles, one by one, tightening the rope that corresponds to each side pole, as you go.
8. Once you have gone around the whole tent tightening the ropes and straightening the poles, make another pass around the whole tent tightening each rope a second time.
